

FINAL STAGES OF HOUSE DESIGN ARCH 201

You now have two weeks left to complete the design of your house. Final drawings will be due on Tuesday Nov 7, at 2.00 pm, and ~~wx~~ we will hold a ~~x~~ crit and discussion that afternoon, in a special room to be announced.

The following drawings will be required:

1. Plan(s) at 1/4 inch scale.
2. Site plan (if needed) at some smaller scale.
3. At least one section at 1/4 inch scale.
4. At least two elevations at 1/4 inch scale.
5. Two or three selected details, which you ~~particularly~~ particularly like, and which particularly express the character of the building, at 1 1/2 inches to the foot.
6. A short description, ^{with} ~~mm~~ statements and freehand sketches, which describes the building system you are using, and above all describes the sequence of construction (in the manner of the model we have given you).

(items 1-5)

We would like you to prepare all your drawings, by tracing in ink, freehand, over a hardline pencil drawing once you have worked it out.

To start work, start by trying to define a building system (item 6) very roughly, then start making sketches of elevations and sections, and keep going back and forward until you like the whole thing and it all hangs together. Please remember that your drawings are intended to simulate an actual building as built, and are not a set of drawings from which to make a building at all.
